SUMMARY

Results-driven Cybersecurity Analyst with **2+ years** of experience in **24/7 global SOC operations**, specialising in **DevSecOps**, leveraging Python **automation** and **CI/CD** security integration to reduce MTTR and harden infrastructure against evolving threats. Proven expert in streamlining incident response and vulnerability management, with a track record of delivering scalable, secure solutions for international clients and reducing manual security operations by **40%** through custom tooling.

TECHNICAL SKILLS

Security Operations : Threat Detection & Analysis, Incident Response, Log Analysis , IOC Investigation, Vulnerability Assessment , Penetration Testing , Kill Chain Analysis, MITRE ATT&CK Threat Intelligence NIST Framework ISO 27001

Application Security : SAST, DAST, SCA, Threat Modeling, OWASP Top 10, Secure SDLC, Vulnerability Management

Tools & Platforms : SIEM, EDR/XDR , SentinelOne, Metasploit, Nessus ,Nmap ,Burp Suite, SOAR, AD

Security Automation : Python Bash, Jenkins, CI/CD Pipeline Integration , Jira Automation, Docker , AWS , Terraform

WORK EXPERIENCE

Cybersecurity Analyst

June 24 – Present

Gradient Cyber (Texas , USA - Remote)

- Applied MITRE ATT&CK framework to build and tune detection rules targeting specific TTPs reduced false positives by 90% and accelerated alert handling across CrowdStrike, Splunk, and Microsoft Defender
- Built and maintained **security automation pipelines** (Python, Bash, Jenkins) for vulnerability correlation and CI/CD integration, reducing operational overhead by **40%**.
- Wrote Bash scripts for log parsing, CSV extraction, and threat intelligence IP checking across multiple sources — eliminating manual per-source verification
- Built and maintained **SIEM** rules to reduce threat dwell time and improve signal-to-noise ratio
- Managed SIEM ingestion from 10+ sources ensuring data integrity and normalization for real-time detection and forensics
- Integrated **SAST/DAST** tools into **CI/CD pipelines** in partnership with DevOps, hardening shift-left security posture
- Deployed **Terraform-managed AWS security** configurations for scalable infrastructure hardening
- Collaborated with clients across USA, Germany, and other markets delivering 24/7 SOC operations and incident response
- Mentored junior analysts on log analysis, incident response workflows, and triage automation scripts
- Expanding expertise in AI security — **guardrails, OPA policies**, and prompt injection mitigation

Cybersecurity Intern

Gradient Cyber

January 2024 – June 2024

- Monitored and investigated 100+ daily security alerts across Cortex XDR, SentinelOne, Carbon Black, Sophos, and CrowdStrike Falcon — maintaining 95–99% incident identification accuracy
- Triaged Microsoft 365 Defender alerts (phishing, endpoint, cloud), reducing MTTR by 25%
- Analyzed **Active Directory** logs and endpoint telemetry to detect unauthorized access, privilege escalation, and lateral movement
- Performed **SentinelOne** Deep Visibility investigations across processes, networks, and files
- Leveraged **Elasticsearch and Kibana** for log correlation and threat hunting queries to identify emerging threats

Security Intern

Glbai , Pune

March, 2023 – August 2023

- Conducted comprehensive **vulnerability scans** using industry-standard tools including Metasploitable, Nessus, Nmap, and other security assessment utilities to identify and prioritize security weaknesses.
- Leveraged Kioptrix and Kali Linux's penetration testing tool suite to perform in-depth analysis and discover vulnerabilities across test environments.
- Performed web application security assessments using **Burp Suite**, OWASP ZAP, and related OWASP tools, identifying and helping remediate vulnerabilities to improve application security posture.
- Developed a static company client website using HTML, CSS, and **JavaScript**, supporting internal and client-facing communication needs.

PROJECTS

Pentesting MCP Tool (Automated Recon + Vulnerability Scanner)

Utilised docker MCP to automate reconnaissance and vulnerability scanning for web applications, integrating with the **CVE database** to identify known vulnerabilities and generate comprehensive reports. wrote python scripts to automate the entire process, reducing manual effort and improving efficiency in security assessments.

Active Directory Hacking Lab

Designed and implemented an Active Directory home lab using three VMs: Windows 10 Home OS, Windows 2022 Server, and Kali Linux .

Simulated attacks like **Kerberos** authentication and **LLMNR poisoning** using Kali Linux to test the security of the Windows environment.

Authored a comprehensive thesis documenting the project setup, attack simulations, and findings.

EDUCATION

Ajay Kumar Garg Engineering College

Bachelor of Engineering - Information Technology

2020- 2024
